About

Generative AI Engineer — Full-Stack Developer — AI/ML Experimenter

Builder at heart, focused on crafting real-world products powered by Generative AI. I design and deploy end-to-end systems—from frontend tweaks to LLM orchestration—using tools like LangChain, Groq, Gemini APIs, Flask, and React. Passionate about agentic workflows, voice interfaces, RAG pipelines, and AI-first user experiences.

Also love writing about the "why" behind the build—translating complex tech into clear stories.

Education

Kalinga Institute of Industrial Technology (KIIT)

Bachelor of Technology in Computer Science

Expected May 2027

Bhubaneswar, Odisha

- **Relevant Coursework:** Web Development, GenAI, AI/ML/DL

Projects

PRVGpt – Private LLM Workspace | GroqCloud, FAISS, LangChain, Python, Flask, React, TailwindCSS

- Built **PRVGpt**, a private developer workspace to chat with codebases securely using Groq-powered LLMs and semantic memory.
- Implemented FAISS for vector search and LangChain for context-aware prompt orchestration over local repositories and codebases.
- Designed a modular React frontend with model selector and repo browser; Flask backend managed embeddings and inference.
- Demo: LinkedIn Showcase

ShopperMan – Voice-Assisted AI Shopping Companion | Flask, Python, Next.js, Web Scraping, genAI, Omnidimension Voice Agent

- Created a real-time shopping assistant where users paste product links to get AI-generated summaries, pros/cons, and better alternatives.
- Used web scraping to extract product metadata and GenAI for natural-language recommendations. Integrated omnidimension for voice interaction.
- Demo: LinkedIn Showcase

ChefBook – AI Restaurant Site Generator | MERN Stack, genAI, OCR, Cloudinary

- Built a platform where restaurant owners upload scanned menus to instantly generate a complete digital site with images and AI-written dish descriptions.
- Leveraged OCR + GenAI to automate content generation; created a no-code onboarding experience for non-technical users.
- Demo: LinkedIn Showcase

Portofolo – Agentic Style Ai Portfolio Agent | LangChain, GroqCloud, Flask, Python, Next.js, TailwindCSS

- Developed a portfolio where an AI agent (Hana) engages with recruiters via real-time chat to answer questions, explain projects, and simulate interviews.
- Used LangChain memory + Groq-powered inference; deployed backend via HuggingFace and frontend via Vercel.
- Live: portofolo-sigma.vercel.app

Technical Skills

Languages: JavaScript, Python, Java, C, HTML, CSS

Frameworks and Libraries: React.js, Next.js, Express.js, Node.js, Tailwind CSS, Pandas, NumPy, TensorFlow, Keras, Scikit-learn, LangChain

Tools: Git, VS Code, Jupyter Notebook, Kaggle

Core Concepts: Machine Learning, Deep Learning, Generative AI, Artificial Intelligence, NLP, RNN, CNN, Transformers
